

CLAIMS

I claim:

1. A device for spreading dough comprising:
a base member, said base member configured as a semi-circle having an inner circumferential surface, an outer circumferential surface, a length, a width, a first end and a second end; and
means for rocking said base member back and forth to spread dough.
2. A device for spreading dough as recited in claim 1, wherein said means includes a first handle member, said first handle member disposed at said first end on said inner circumferential surface; and
a second handle member, said second handle member disposed at said second end on said inner circumferential surface.
3. A device for spreading dough as recited in claim 2, wherein said first handle member and said second handle member are of rounded configuration so as to present an ergonomic gripping surface.
4. A device for spreading dough as recited in claim 3, wherein said base member, said first handle member and said second handle member are of one-piece construction.

5. A device for spreading dough as recited in claim 4, wherein said base member, said first handle member and said second handle member are fabricated from wood.

6. A device for spreading dough as recited in claim 4, wherein said base member, said first handle member and said second handle member are fabricated from plastic.

7. A device for spreading dough as recited in claim 4, wherein said base member, said first handle member and said second handle member are fabricated from marble.

8. A device for spreading dough comprising:

a base member, said base member having configured as a semi-circle having an inner circumferential surface, an outer circumferential surface, a length, a width, a first end and a second end;

a first handle member, said first handle member disposed at said first end on said inner circumferential surface; and

a second handle member, said second handle member disposed at said second end on said inner circumferential surface; and

wherein said base member, said first handle member and said second handle member are of one-piece construction.

9. A device for spreading dough as recited in claim 8, wherein said base member, said first handle member and said second handle member are fabricated from wood.

10. A device for spreading dough as recited in claim 8, wherein said base member, said first handle member and said second handle member are fabricated from marble.
